VEHICLE PAINT PROTECTION

PDF download information sheet: V2.1

Dynamic Paint Protection

Paint protection film, or PPF is an invisible protective film applied to any vehicle's paintwork in order to offer far greater protection compared to various tough polishes or ceramic coatings. The PPF is incredibly strong with self-healing properties allowing minor scratches to be removed using a hair dryer! Before PPF can be applied, the vehicle's paintwork has to be detailed and any damage repaired. Dynamic Modifications provide a consultation services where they can inspect your vehicle's bodywork and advise on a course of action.

Key benefits:

Paint protection film offers prevention of stone chips and scuffs.

Self healing properties with scratches.

Easy to replace or repair.
